# Surety for Renewable Energy

Our Surety solution helps renewable energy companies meet contractual and regulatory requirements across the full project lifecycle.
As an alternative to Letters of Credit and escrow arrangements, our surety bonds can help clients preserve liquidity and unlock capacity within their banking facilities for other business priorities.

## Our offering includes

- **Bid Bonds**
  Guarantee that a contractor will honor its bid and enter into the contract if selected.
- **Performance Bonds**
  Guarantee the contractor's performance in accordance with the agreed contractual requirements.
- **Payment Bonds**
  Guarantee payment to subcontractors and suppliers.
- **Power Purchase Agreement Bonds**
  Support obligations relating to the delivery of an agreed amount of energy under a power purchase agreement.
- **Grid Connection Bonds**
  Support obligations toward the transmission system operator relating to grid reinforcement or the construction of required transmission infrastructure.
- **Decommissioning Bonds**
  Guarantee that agreed decommissioning obligations will be fulfilled at the end of a project's operating life.
- **Land Rent Bonds**
  Support lease obligations, including agreed reinstatement or refurbishment requirements when leased land is returned.
- **Prepayment Bonds**
  Provide security for an upfront payment or prepayment made under a contract.
- **Environmental Bonds**
  Support obligations relating to environmental restoration, remediation, waste removal, or securing a site following its use.
